Report :

Selenium webdriver extension

- 1.first we download katalon recorder ,
- 2 .second after install it we go to the our preferred website
3. We start playing the katalon recorder
- 4.then we create a new test cases file and then
5. We go to the website
- 6 we try to login to the system
- 7.after login to the system ,there create some id ,username
- 8.then we try to open the website using playbutton in katalon webdriver
9. We can see the preferred website are open through play button
10. We export the execute file in c# version and save it
11. Then open the file with microsoft visual studio -19
12. Then we run this code ,and select a executable project which build in past
- 13 ,we ran this code using chrome webdriver ,(we downloaded chrome webdriver.exe and save it to driver file)
- 14 . we build the solution and after run this our preferred website will be open through our solution code
- 15 .we can use firefox webdriver instead chrome web driver
